SUMMARY

Software Development Engineer with 1 year of professional experience on **MobiKwik's merchant engineering team**, building and operating Java/Spring Boot systems for merchant operations, payment-device workflows, and transaction notifications. Shipped a greenfield platform serving **1,200+ agents and 5,000+ tasks/day** and cut peak API latency from **~7s to <150ms** through production root-cause analysis. Strong in data structures and algorithms with **500+ problems solved**, with hands-on automated testing, AWS, event-driven systems, debugging, and full-stack development.

EXPERIENCE

MobiKwik - Software Development Engineer I | Gurgaon, India | Feb 2026 - Jul 2026

- Owned end-to-end design, implementation, testing, and production delivery of a greenfield **Java, Spring Boot, MySQL** Field Service Management platform, shipped in 2 months for **1,200+ agents processing 5,000+ tasks/day** across merchant operations.
- Built maintainable REST APIs, transactional task workflows, deterministic assignment/state logic, and SQL aggregation APIs; also delivered backend workflows supporting **merchant lending journeys** and operational dashboards.
- Troubleshot the platform's highest-latency production path with Grafana, identified synchronous database/audit work on the request path, and moved it to Spring @Async, reducing peak API latency from **~7s to <150ms**.
- Shipped **30+ post-launch reliability and performance improvements** driven by monitoring and user pain points, including SQL/query optimization, composite indexing, pagination, Redis caching, aggregation queries, and defect resolution.
- Instrumented services with Spring Boot Actuator, Micrometer, and Grafana; worked with product, frontend, business, and operations teams on requirements, API contracts, implementation trade-offs, releases, code review, testing, and post-release validation.

MobiKwik - Software Development Engineer Intern | Gurgaon, India | Jul 2025 - Jan 2026

- Developed and debugged **Merchant Panel** APIs for onboarding, dynamic forms, dashboards, and document workflows using Java, Spring Boot, PostgreSQL, and MongoDB, supporting merchant-facing production workflows.
- Built a merchant **Soundbox transaction ACK** pipeline using AWS IoT/MQTT and Amazon SQS with asynchronous processing, database-level idempotency, retry/DLQ handling, and tuned failure processing; improved ACK speed by approximately **2x**.
- Consumed production **Kafka payment events** and called an internal notification service to send merchant-app transaction alerts; used retry with backoff and routed terminal failures to a DLQ.
- Extended Soundbox localization from **2 to 5 languages**, improving usability of the merchant payment-device experience.

PROJECTS

Job Copilot - AI Job Intelligence Platform | GitHub

Java | Spring Boot | PostgreSQL | REST | Docker | JUnit/Mockito | Automated Regression & Integration Testing

- Built production-style Spring Boot workflows for job ingestion, structured extraction, matching, ranking, and external ATS synchronization, with explicit validation and deterministic failure handling across service boundaries.
- Built and repeatedly ran a **900+ test** automated suite spanning unit, integration, regression, parity/golden, malformed-input, provider-failure, ordering, concurrency, idempotency, and recovery scenarios to detect regressions before milestone freezes.
- Engineered correctness controls including transactional updates, optimistic revisioning, run fencing, leases/heartbeats, startup recovery, and exactly-once model invocation; used independent review and adversarial QA to validate changes before acceptance.

Raahi - Full-Stack Ride Booking Platform | GitHub

Java | Spring Boot | PostgreSQL | React Native | JavaScript | JWT | AWS

- Built Spring Boot REST services and a React Native/JavaScript client with PostgreSQL, JWT authentication, role-based authorization, and transactional ride/wallet workflows.
- Improved ride batching by **20%** and reduced manual payment handling by **40%** through batching and wallet auto-pay workflows.

SKILLS

Languages & Core CS: Java, C++, Python, JavaScript, SQL | Data Structures & Algorithms, OOP, Problem Solving
Backend & Full Stack: Spring Boot, REST APIs, Microservices, JPA/Hibernate, Transaction Management, React Native
Testing & Engineering Quality: JUnit, Mockito, Unit Testing, Integration Testing, Automated Regression Testing, Debugging, Root-Cause Analysis
Data, Messaging & Reliability: MySQL, PostgreSQL, MongoDB, Redis, Kafka, Amazon SQS, AWS IoT/MQTT, Idempotency, Retry/DLQ, Async Processing
Cloud & Tooling: AWS, Docker, Git, Maven, Grafana, Micrometer, Spring Boot Actuator

EDUCATION

National Institute of Technology, Tiruchirappalli - Master of Computer Applications | 2021-2024 | CGPA: 7.26
University of Delhi, Deen Dayal Upadhyaya College - B.Sc. (Hons.) Computer Science | 2018-2021 | CGPA: 7.47

ACHIEVEMENTS

- Solved **500+ Data Structures & Algorithms problems**; ranked 4,088 among 40,000+ participants in CodeChef Starters 59.
- Vice President, Sanganika - led a 200+ member technical community and mentored 100+ students in DSA and System Design.
